4	verify the height and weight of the chair
5	verify the comfortabilty of the chair , design
6	Check the balance of the chair with one arm.
7	Check the balance of the chair with three legs.
8	Check there nothing is breaking, no damage to the Chair, and the Chair is performed without any issues.
9	Check the stress testing of the chair by dropping the Chair down from the practical height.
10	Check the chair backrest option.
11	Check whether all legs of the chair on a plane surface are equal.
12	Check if the chair is compatible for taking a rest.
13	Check if the chair has an adjustment functionality or not.
14	Check the sitting space as per mentioned in the requirement document.
15	Check whether the legs of the chair have any wheels or not.
16	Check whether the legs of the chair have any wheels or not.
17	Check what the maximum amount of load the chair is handling is.
18	Check the date is stable enough to take any human load.
19	Check the color of the table is as per the SRS documents.
20	Check if the dimension of the chair is as per the specification document.

[illegible]

## Coffee vending machine

SR No	Positive
1	Verify that the dimension of the coffee machine is as per the specification.
2	Verify that the machine's body color as well brand is correctly visible and as per specification.
3	Verify the input mechanism for coffee ingredients-milk, water, coffee beans/powder, etc.
4	Verify that the quantity of hot water, milk, coffee powder per serving is correct.
5	Verify the power/voltage requirements of the machine
6	Verify the effect of suddenly switching off the machine or cutting the power. The machine should stop in that situation and in power resumption, the remaining coffee should not get come out of the nozzle.
7	Verify that coffee should not leak when not in operation
8	Verify the amount of coffee served in single-serving is as per specification
9	Verify that the digital display displays correct information
10	Check if the machine can be switched on and off using the power buttons
11	Check for the indicator lights when the machine is switched on-off
12	Verify that each button has an image/text with it, indicating the task it performs
13	Verify that complete quantity of coffee should get poured in a single operation, no residual coffee should be present in the nozzle
14	Verify that the coffee served has the same and correct temperature each time it is served by the machine
15	Verify that system should display an error when it runs out of ingredients
16	Verify that there is the passage for residual/extra coffee in the machine
17	Verify that machine should work correctly in different climatic, moistures and temperature conditions
18	Verify that machine should not make too much sound when in operation

19 Check if the power button of the coffee vending machine is working correctly after pressing the power button.

20 Check the indicator lights are displaying correctly when the coffee vending machine is going to switch off or on.  
Check all the buttons of the coffee vending machine have an image text on them, which indicates what task will be performed if you press the button.  
21 Check the former up; the coffee vending machine is working as expected.

22 Check the complete quantity of copy poured in a single operation, and no coffees are stored in the nozzle area.  
23 Check the complete quantity of copy poured in a single operation, and no coffees are stored in the nozzle area.  
24

Check if some ingredients if finished. Then it should display an error message on the LED screen.  
25 Check the time they take to serve coffee should be the same as mentioned in the specification document.  
26

Check if a button is pressed multiple times; then, the operation should be performed multiple times.  
If you have pushed the button five times the coffee button, five should be served.

27 Check there should be a button for passes for extra coffee in the machine  
28 Check if the brand logo is visible in the specification document.

29 Check for the cup holder dimension as per specification/ or market standard.

30

## Negative

Check the functioning of the coffee machine when two/multiple buttons are pressed simultaneously

Check the functioning of coffee machine with a lesser or higher voltage than required

Check the functioning of the coffee machine if the ingredient container's capacity is exceeded

check if vending machine has proper buttons

behavior of the vending machine when the power supply is improper.

machine operation should be working properly if the container's capacity.

Check for the cup holder dimension as per specification/ or market standard.

Check the performance of the coffee vending machine when the ingredients container's capacity is exceeded.

Check whether the machine gives an error message or works when the boxes are empty.

Check whether the machine works if the user enters a higher-value coin.

Check whether the machine works if the user enters a lower-value coin.

Check whether the machine works if the user enters a foreign currency coin

Check whether the machine works if the user enters a foreign currency coin.

Check whether the machine works if the user enters a fake coin.

Check whether the machine works if the user simultaneously presses the half-cup and full-cup buttons.

Check whether the machine works if the user presses all buttons at once.

Check whether the machine works if the user places the machine upside down.

Check whether the machine works if the user places it horizontally.

Check whether the machine is FIS and ISI-approved.

Check whether the machine stops working if the user tries to open the cover while pouring coffee.

Check whether a user can open the compartment with a fake key.

Check whether the machine works if the user pulls out the cord after inserting the command and then plugs it again.

Check whether the machine can give a shock if touched with bare hands and feet on the floor.

	15 verify you can make a vidio call.
	16 verify you can make group vidio call .
	17 verify you can change filter with vidio call .
	18 verify you can minimize vidio & send message.
	19 for filter screen ( front / back camera ).
	20 Verify the Camera should be available on the Mobile phone.
	21 Verify the Camera driver should be available and installed.
	22 Verify the Camera Icon should be available on the Mobile phone menu.
	23 Verify the Angle of Coverage of the Camera.
	24

## Negative

Verify the availability of the Red Eye correction feature in the Camera.

Verify the Zoom In/Out functionality in the Camera.

Verify the Resolution of the Camera on a Mobile phone.

verify that if you have muted notifications you will not get notification on screen

verify that if you are talking with someone on video call and if anyone contact you then it is showing busy on other call.

verify that if you have unsent message then that message will be deleted from your friend chat also

verify that if you have block or report someone then you can not chat with that people

verify that if you have set privacy like only followers or following can send message then except that people can not do message to you.

verify that if people do video call from near then they will get some irritate sound from video calling.

## Lift

SR No	Positive	Negative
1	Verify the type of Elevator	Check for the appropriate no of buttons.
2	verify the size of lift height and width or weight	Check-In that switchboard, how many buttons are there?
3	verify the capacity of the person stay inside the lift	Add one more person than the specified weight and check the response of lift.
4	check that the lift is working or not	Add more number of people regardless of weight and check the volume limitations of lift.
5	select the option like up or down	Create smoke or fire inside lift and check the response.
6	there are some digital display of numeric	Try pressing the open button while the lift is moving.
7	verify the some sunction like 1 to 10 number , close button , open button , light , alert button, fan , etc.	If the door closes automatically, also check for the sensor. Suppose the closing time is 2 min, and it passes, and people are still getting in. What happens? Does the door gets closed, or do you wait for the people to get in?
8	select the option as per your requirment	When the outside person wants to open the door, the inside person wants to close the door simultaneously.
9	verify that the door is close properly	After getting into the lift, one person is there. He wants to go up, but we want to go down already. He specified the floor number before we entered the lift. Afterward, we determined our floor number, then what was happening?
10	verify the cctv camera	Create smoke or fire inside lift and check the response.
11	verify that some speaker voice	Add more number of people regardless of weight and check the volume limitations of lift.
12	Check the first lift is made with which material. (Is it made of steel or iron.)	Try pressing the open button while the lift is moving.
13	Check What type of doors is grill type or door type.	Create smoke or fire inside lift and check the response.
14	Check which side of the door button switches board is there or not.	

Check when I touch the open button if that lift is opening or not

15

Check What happens if I touch the

16 open button twice?

Check What happens when I press the open button while the lift is moving and in the middle of the two floors?

Check What happens when I press the

17 open button for some time?

Check for the sound when the lift is opening.

18

After entering the lift, press the up button.

In which direction am I moving?

19

After entering the lift, press the button.

20 In which direction am I moving?

When a person is in the lift, is any light

21 there or not?

How many persons simultaneously carry the lift in the sense of moving

22 time?

Check Without load. Is it moving if we press the up button?

23

If the door closes automatically, check

24 for the closing time.

The lift is empty and is moving downwards. I entered and wanted to go up. Is there a button to change the lift's direction, and is the button working?

25
